

Computational Semantics and Natural Language Understanding, 2025-2026

Project Assignment

General Guidelines

1. The project should be done by groups of four, the same groups as for the paper presentation assignment.
2. The project should address a focused research question derived from the paper chosen for the summary: it is either a next step beyond the work described in the paper, or a research question related in other ways to the paper.
3. The project assignment final report should be typed in English.
4. The project should include NLP experiments that aim at answering the research question. As part of the submission, the code and the data used in the experiments should be included.
5. The final report for the project should be 6 pages in 11pt font, not including the bibliography and appendices.
6. Tools and useful tutorials for doing the experiments:
 - a) Pytorch Tutorials: these [tutorials](#) introduce Pytorch.
 - b) [HuggingFace tutorial](#) for finetuning a pre-trained model.
7. Criteria of evaluation of the final report: Reproducibility (15 pts), Presentation Quality (30 pts), Soundness (30 pts), Depth (15 pts), Related Work (10 pts).
